

CASE STUDY **T&T HOMES**

RESTORING SAFETY & TRUST

Location : Delhi, India

Sector : Residential township

Product Featured : 4 Mil Safety Film

CHALLENGE

Designing a Workspace That Reflects a Brand and Supports Its People

As one of India's leading technology giants, HCL Technologies is known for its cutting-edge innovation. At one of its sprawling campuses in India, they faced the challenge of upgrading glass interiors

SOLUTION

From Chaos to Control — One Layer at a Time
Global Window Films took initiative before a disaster could escalate

RESULTS AND BENEFITS

High-risk Safety Hazard— Sharp fragments from broken railing panels posed an immediate danger to all

Our **technical team proactively approached** the developers with a simple yet powerful solution: application of **4 Mil Safety Film** across all railing panels

Shatter Control— Glass no longer dangerously disintegrate upon impact

Resident Mental Comfort— Resolved anxiety and restored trust among resident families

Zero Preparedness: The project team was clueless on the root cause or corrective actions

Conducted a **live mock-up and real-world trials on-site**, simulating impact scenarios to show how the film prevents shattering

Human Safety— No related injuries reported post application, even during high-impact tests

Liability on the peace of mind and the occupants started raising frequent concerns

The film now **holds shattered glass fragments in place**, dramatically reducing injury risk

Seamless Integration— No aesthetic compromise and transparent finish

Rapid Deployment— Swift on-ground application across panels with minimal disruption
